

de Gids Nieuwe Vaderlandsche Letteroefeningen (59)

Filesize: 7.48 MB

Reviews

The publication is easy in read through better to recognize. It usually will not cost too much. You wont feel monotony at whenever you want of the time (that's what catalogs are for concerning when you question me).

(Rebecca Bechtelar)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 104 pages. Original publisher: Ann Arbor, Mich. : U. S. Dept. of Commerce, National Oceanic and Atmospheric Administration, Environmental Research Laboratories, Great Lakes Environmental Research Laboratory, 1978 OCLC Number: (OCoLC)78376529 Subject: Hydraulic models. Excerpt: . . . the respective water surface elevation at Lake Ontario or the H reservoir pool; the river flow entering the reservoir pool; fb the discharge through the powerhouse; and Aph the surface area of the powerhouse reservoir pool, km². fb The superscript p indicates the solution time increment t At at Equations (10) and (11) complete the equation set for the model. Equa-and (7) are applied to each of the 30 reaches and tions (3), (5), (6), 21 nodal points in the model. These equations, along with equations form a matrix of 120 equations and 122 unknowns. Either (10) and (11), the net total supply (NTS) or water at Kingston, and either the level the discharge through the powerhouse (Q) or the water level at the leaving 120 equations and powerhouse are specified as functions of time, 120 unknowns. The non-linear nature of the equation matrix requires application A Newton-Raphson algorithm with of an iterative solution technique. The Newton-Raphson projected approximations is used in the model. procedure can be defined by equations of the form $u_i = a_i + b_i Q_j$, (12) $F_i = c_i - d_i H_j$ where u_i and d_i represent the upstream and downstream points, respectively, of each reach i ($i = 1$ to 30). The partial derivatives a_i , d_i , and $d_i Q_j$ are evaluated with finite difference techniques and reach (...)
