Paperback. Book Condition: New. Paperback. 368 pages. We know from the success of titles such as Web Standards Solutions , Cascading Style Sheets: Separating Content from Presentation, and the Web Designers Reference that web designers are increasingly concerned with making sites that dont just look pretty, but are also built using current best practices. There are three main technologies married together to create usable, standards-compliant web designs: XHTML for data structure, Cascading Style Sheets for styling your data, and JavaScript for adding dynamic effects and manipulating structure on the fly using the Document Object Model. This book is about the latter of the three. DOM Scripting: Web Design with JavaScript and the Document Object Model gives you everything you need to start using JavaScript and the Document Object Model to enhance your web pages with client-side dynamic effects. Jerney starts off by giving you a basic crash course in JavaScript and the DOM, then move on to provide you with several real world examples built up from scratch including dynamic image galleries and dynamic menus, and show you how to manipulate web page style using the CSS DOM, and create markup on the fly. Youll learn how to: Apply dynamic behavior to your pages without inserting JavaScript in your markup. Write scripts that degrade gracefully when JavaScript isnt available. Use web standards to ensure cross-browser compatibility. Harness the power of the DOM to create user-controlled animation. Also includes an introduction to Ajax. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
