

Applied Groundwater Modeling: Simulation of Flow and Advective Transport (Hardback)

By Mary P Anderson, William W Woessner, Randal Hunt

Elsevier Science Publishing Co Inc, United States, 2015.
 Hardback. Book Condition: New. 2nd Revised edition. 235 x 191 mm. Language: English . Brand New Book. This second edition is extensively revised throughout with expanded discussion of modeling fundamentals and coverage of advances in model calibration and uncertainty analysis that are revolutionizing the science of groundwater modeling. The text is intended for undergraduate and graduate level courses in applied groundwater modeling and as a comprehensive reference for environmental consultants and scientists/engineers in industry and governmental agencies. * Explains how to formulate a conceptual model of a groundwater system and translate it into a numerical model * Demonstrates how modeling concepts, including boundary conditions, are implemented in two groundwater flow codes-- MODFLOW (for finite differences) and FEFLOW (for finite elements) * Discusses particle tracking methods and codes for flowpath analysis and advective transport of contaminants * Summarizes parameter estimation and uncertainty analysis approaches using the code PEST to illustrate how concepts are implemented * Discusses modeling ethics and preparation of the modeling report * Includes Boxes that amplify and supplement topics covered in the text * Each chapter presents lists of common modeling errors and problem sets that illustrate concepts.

Reviews

Without doubt, this is the best job by any writer. It is amongst the most incredible ebook i have got study. You may like how the author write this publication.

-- **Dr. Brendon Kautzer II**

This ebook is great. It can be rally intriguing throug studying time period. Your lifestyle period is going to be convert as soon as you full looking over this ebook.
