RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 72 pages. Original publisher: Rapid City, S. D. : U. S. Dept. of the Interior, U. S. Geological Survey ; Denver, CO : U. S. Geological Survey, Branch of Information Services distributor, 2001. OCLC Number: (OCoLC)47082870 Subject: Artificial groundwater recharge -- Black Hills Region (S. D. and Wyo. ). Excerpt: . . . common around the periphery of the Black Hills. The Large streamflow losses also occur in many locations hydrogeologic setting of the Black Hills area is within the outcrop of the Minnelusa Formation, and schematically illustrated in figure 5. limited losses probably also occur within the outcrop of the Minnekahta Limestone ( Hortness and Driscoll, Streamflow within the study area is affected by 1998 ). Large artesian springs occur in many locations both topography and geology. The base flow of most downgradient from loss zones, most commonly within streams in the Black Hills originates in the higher or near the outcrop of the Spearfish Formation. These elevations, where relatively large precipitation and small evapotranspiration result in more water being springs provide an important source of base flow in available for springflow and streamflow. Numerous many streams beyond the periphery of the Black Hills streams have significant headwater springs originating ( Rahn and Gries, 1973; Miller and Driscoll, 1998 ). from the Paleozoic carbonate rocks along the Lime-stone Plateau ( fig. 1 ) on the western side of the study area. This area is a large discharge zone for aquifers in Acknowledgments the Paleozoic rock interval, especially for the Madison The authors acknowledge the efforts of the West aquifer. The headwater springs provide significant Dakota Water Development District for helping to base flow for several streams that flow across the crys-develop and support the Black Hills Hydrology...
