

## Odorant Receptor Gene Regulation in the Zebrafish, *Danio rerio*

Filesize: 8.78 MB

### ***Reviews***

*The publication is great and fantastic. It is probably the most remarkable book i actually have read through. Its been printed in an exceedingly easy way and it is merely right after i finished reading through this publication where in fact altered me, modify the way i think.  
(Tomas Witting)*

## ODORANT RECEPTOR GENE REGULATION IN THE ZEBRAFISH, DANIO RERIO

To get **Odorant Receptor Gene Regulation in the Zebrafish, Danio rerio** PDF, make sure you follow the link listed below and save the ebook or have accessibility to additional information which are in conjunction with ODORANT RECEPTOR GENE REGULATION IN THE ZEBRAFISH, DANIO RERIO book.

Dr. H. H. Verlag Driesen Dez 2002, 2002. Taschenbuch. Book Condition: Neu. 19x12x cm. Neuware - The sense of smell enables an organism to extract vital information from the composition of its odor environment. Each olfactory receptor neuron faces the daunting task of selecting one odorant receptor (OR) gene from the vast array of about 100 and 1,000 OR genes in fish and mammals, respectively. Thus far, the control mechanism of this highly differential gene expression is largely unknown. Silke Argo evaluates several features of OR genes in the olfactory system of a microsmatic vertebrate, the zebrafish, *Danio rerio*, in order to assess the regulation of OR gene expression: The temporal expression pattern of endogenous zebrafish OR (ZOR) genes is investigated by a detailed quantitative analysis. The genomic arrangement of ZOR genes is elucidated by a linkage analysis and screen of a zebrafish genomic DNA library. Moreover, the author identifies two putative ZOR gene promoter regions and demonstrates the functionality by means of their ability to drive expression of the GFP reporter gene in vivo. Finally, for the first time the axonal pattern of olfactory receptor neurons that are transgenic for a particular ZOR gene promoter/GFP construct is shown. Based on these observations a two-step model for a mechanism of OR gene regulation is suggested, which comprises as a first step the determination of a group of OR genes to be accessible for activation and as a second step a stochastic selection that achieves the exclusive expression of a single OR gene of the group. Restriction of the large array of odorant receptors to groups of genes might facilitate the setup and maintenance of the functional connections between the olfactory epithelium and the olfactory bulb and thus may constitute a general mechanism of vertebrate OR gene regulation. The author: born...
